### Nortel Door Opening Controller NT8B79FB

This is the door opening control unit used to allow Norstar systems users to open an internal or external door via an access code. Great for highly restricted areas. Provides Norstar Door phone with ability to unlock electric doors simply by pressing an 'open' soft key display button or a dial pad digit on their Norstar set. In addition, because the Door phone with the DOC enables electronic devices to be controlled through contact closure (third party supplied), dial pad digit commands from a Norstar telephone allows a building occupant to remotely activate alarm systems, surveillance cameras, lights, etc. Each Door phone can communicate with up to twelve (Not recommended) DOCs, providing control of up to twelve electrical devices through the telephone dial pad.
