Actiontec VoSKY Exchange Skype Gateways connect your PBX Phones to SKYPE!!

Make unlimited calls for only \$1.97/mo per line on your CURRENT business PBX/Phone system!!

Your Ultimate Gateway to Skype...

## Exchange Pro | VIT1/E1

### Enterprise-Grade PBX to Skype™ Gateway for T1/E1 Networks

VoSKY continues its acceleration of Skype deployment in the business sphere with its newest enterprise-grade PBX-to-Skype gateway, the VoSKY Exchange Pro VIT1/E1. Aimed at large companies that currently utilize corporate PBXs with a T1 or E1 digital interface, the Exchange Pro VIT1/E1 provides scalable performance that can handle up to 30 Skype calls simultaneously. A stand-alone, rack-mountable appliance that does not require a tethered computer to configure or operate, the VoSKY Exchange Pro VIT1/E1 seamlessly integrates with any existing T1/E1 PBX to add up to 30 lines of Skype. Multiple VoSKY Exchanges in various far-flung locations can then be connected together to enable free calls between colleagues working on different coasts, countries, or continents, while calls to other Skype users outside the office are also free. Calls to non-Skype users are charged at low-cost SkypeOut rates.

#### Simple Setup...Easily Connects to Any PBX

With its seamless integration into existing communications infrastructures (a VoSKY trademark), the VIT1/E1 allows anyone in the office to use Skype in record time. Simply pick up a phone and press a preconfigured number; the VIT1/E1 finds an available Skype line and puts the call through. All of this is done through the usual office phone handsets, since the VIT1/E1 routes the calls through the office PBX.

Integration is another factor in the VIT1/E1's favor. Along with its single-box solution form factor and simple set up, the VIT1/E1 connects to an existing PBX phone system without the need to overhaul the entire phone system, a process that can be costly and time-consuming.

#### Use Skype and Save

Join the many companies already using Skype and save up to 90% on your telecommunications costs each month! As the world's largest VoIP network (over 300 million users worldwide), Skype can be used as a trunking solution to allow businesses to realize tremendous savings over the cost of standard PSTN lines. Calls to other Skype users are free, while calls to non-Skype users are charged at low-cost SkypeOut rates, or at a flat rate using Skype Unlimited.

#### Additional benefits include:

**No headsets... use existing phones** – Since all inbound and outbound calls are routed through the existing office phone systems, standard phones are all you need.

**Return on investment** – Without having to incur costly infrastructure changes, the VIT1/E1 achieves rapid payback through savings realized on long-distance and international calls.

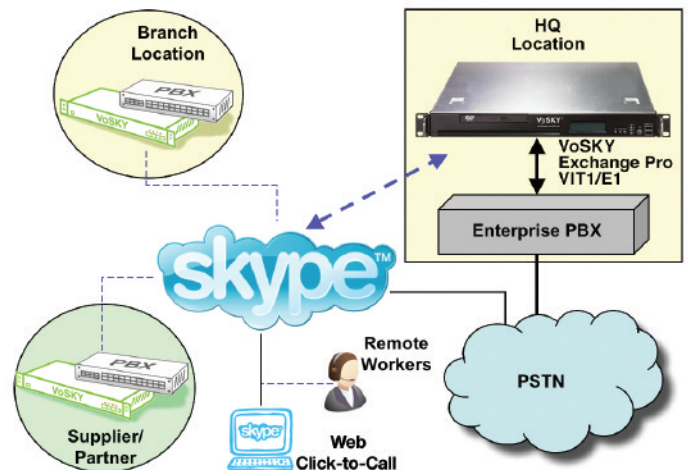

**Free calls plus low-cost calls equal lower phone bills** – Calls between Skype users are free, while SkypeOut rates can range as low as 2 cents per minute to locations anywhere around the world.

#### Features

- Enterprise-grade solution based on VoSKY's Next-Gen Linux architecture
- High-density and scalability designed to meet the capacity requirements of mid-sized and large enterprises
- All-in-one, 1U rack-mountable appliance

#### VIT1/E1 in Mid/Large Enterprise Networks

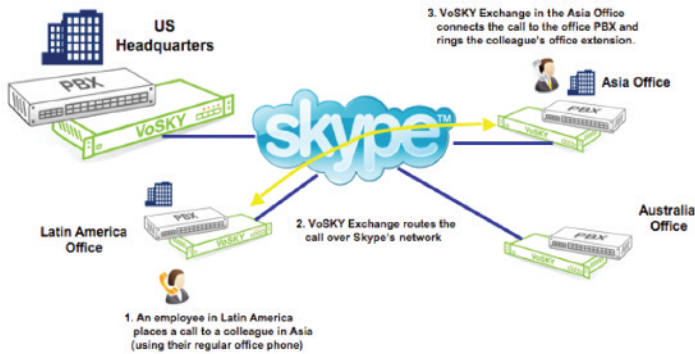

Skype-Enable traditional T1/E1 PBX

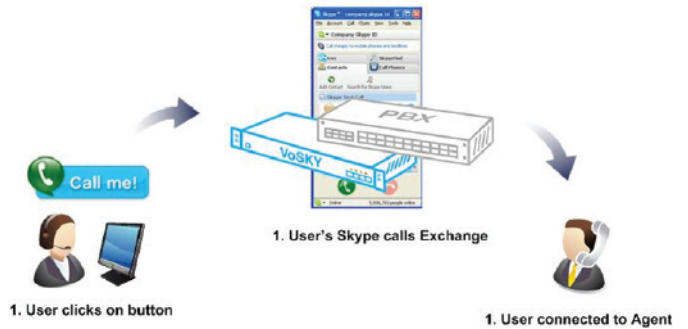

## Exchange Pro VIT1/E1

### Leverage the Power of Skype with Four Business-Class VoIP Applications

**1 Multi-Site PBX Networking** – Companies with offices in different locations can eliminate the cost of intra-office communications by installing VIT1/E1 in every office. This creates a virtual PBX that replaces costly point-to-point leased lines with a Skype-to-Skype trunking system that enables free calls and creates a common office phone system.

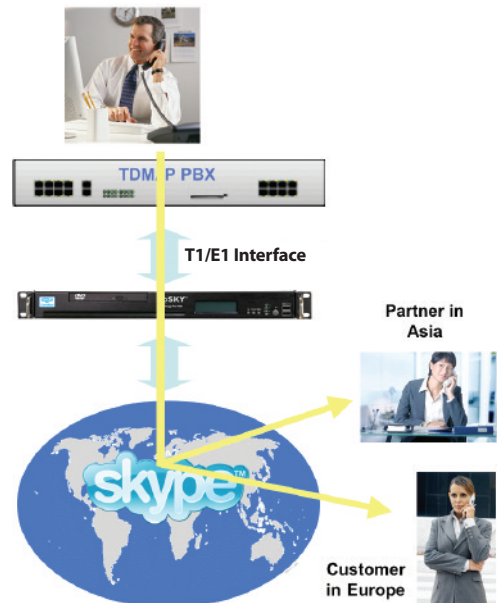

**3 Web Click-to-Call** – Equip your website with a “Click-to-Call” function that allows customers and partners to click a button on the website and place a free Skype call to your sales, customer service, or technical support department.

**2 Remote PBX Access** – Give your road warriors, telecommuters, or satellite office workers remote access to the corporate PBX via Skype. These remote users can call back to headquarters using Skype's softphone on their laptop, at no cost to your company.

**4 Skype Trunking** – Employees can make low-cost calls to any traditional long-distance/international landline or mobile number from their office desk phone by using SkypeOut. Savings of up to 90% off standard phone rates can be realized by taking advantage of SkypeOut.

## Exchange Pro VIT1/E1

### Features

- 1U rack-mountable appliance solution
- Supports a maximum of 30 concurrent inbound/outbound calls
- Simplified Skype account launch process
  - Specify Skype IDs with sequential naming and a shared password
  - Import an account list file (with specified Skype IDs and passwords)
- Good voice quality with 30 concurrent inbound/outbound calls
